Event Trigger 2 (External Event)	109

API Overview

API (or Application Programming Interface) provides automation options for CM4D.

The only object that is created directly is the **QaDoc** object. Creating this object executes CM4D and provides an object for document manipulation. All of the other objects are created through the use of a parent object, starting with the QaDoc object at the root.

[QaDoc](#)

Some commonly used objects are:

- [DataSource](#)
- [Query](#)
- [DataSet](#)
- [Routine](#)
- [Feature](#)
- [Sample](#)
- [Annot](#)
- [Style](#)
- [Sheet/SheetSet](#)
- [Managed Document](#)
- [View](#)

Refer to the following examples of API implementation:

- [Event Trigger 2 \(External Event\)](#)
- [No Events \(External Event\)](#)
- Report Record Database and API

API - Doc (Parent Object)

The only object that is created directly is the **cm4dDoc** object. Creating this object executes CM4D and provides an object for document manipulation. All of the other objects are created through the use of a parent object, starting with the **cm4dDoc** object at the root.

Doc Methods

Parameter	Type	Description	Remarks
CloseDocument();	long		
CreateDataSet(BSTR label);	IQaDataSet*		
CreateQuery(eQueryType type, BSTR label);	IQaQuery*		
CreateQueryDS(short type, BSTR queryLabel, BSTR dataSourceLabel);	IQaDbDataSource*		
CreateScore(BSTR label);	IQaScore*		
CreateSheetSet(BSTR label);	IQaSheetSet*		
CreateStyle(BSTR label);	IQaStyle*		
CreateWireframe(BSTR filename);	IQaWireframe*		
FrameMaximize();	void		
FrameMinimize();	void		
FrameRestore();	void		
GetCM4DDatabaseSchema();	float		
GetCM4DVersion();	double		
GetDataSet(BSTR label);	IQaDataSet*		
GetDataSetByPos(long pos);	IQaDataSet*		
GetDataSetCount();	long		
GetDataSourceByPos(long pos_);	IQaDbDataSource*		
GetDataSourceCount();	long		
GetDocVersion();	double		

GetErrorString(long code);	BSTR		
GetFilename();	BSTR		
GetImages(void);	IQaImages*	Returns an object representing the QaImages list.	
GetLastErrorCode();	short		
GetManagedDocumentByFilename(BSTR filename_);	IQaManagedDocument*	Get a Managed Document from the loaded list by Filename (full path or filename)	
GetManagedDocumentByID(BSTR id_);	IQaManagedDocument*	Get a Managed Document from the loaded list by Managed Document unique identifier.	
GetManagedDocumentByName(BSTR name_);	IQaManagedDocument*	Get a Managed Document from the loaded list by Name.	
GetManagedDocumentByPos(LONG position_, BSTR siteCode_);	IQaManagedDocument*	Get a Managed Document from the loaded list by list position within a specific Site Code.	A passed Site Code value of "*" will be taken to mean within all loaded sites. An empty Site Code value "" will be taken to mean within the authenticated user's default site.
GetManagedDocumentCount(BSTR siteCode_);	LONG	Get Managed Document list count.	

GetPriviledgeByPos(long pos_, BSTR sitecode_);	BSTR		
GetPriviledgeCount(BSTR sitecode_);	long		
GetQuery(BSTR label);	IQaQuery*		
GetQueryByPos(long pos);	IQaQuery*		
GetQueryCount();	long		
GetSchedulerDataSource();	IQaSchedulerData Source*		
GetScore(BSTR label);	IQaScore*		
GetScoreByPos(long pos);	IQaScore*		
GetScoreCount();	long		
GetSheet(BSTR label);	IQaSheet*		
GetSheetByPos(long pos);	IQaSheet*		
GetSheetCount();	long		
GetSheetSet(BSTR sheetSetLabel);	IQaSheetSet*		
GetSheetSetByPos(long pos);	IQaSheetSet*		
GetSheetSetCount();	long		
GetSiteByCode(BSTR siteCode_);	IQaSiteConfigurati on*	Get Site Configuration by Site Code.	
GetSiteByLabel(BSTR siteLabel_);	IQaSiteConfigurati on*	Get Site Configuration by Site Label.	
GetSiteByPos(LONG position_);	IQaSiteConfigurati on*	Get Site Configuration by list position.	
GetSiteCodesByPos(long pos_);	BSTR		
GetSiteCodesCount();	long		

GetSiteCount(void);	LONG	Get Site Configuration list count.	
GetSiteDatabaseSchema();	float		
GetStyle(BSTR label);	IQaStyle*		
GetStyleByPos(long pos);	IQaStyle*		
GetStyleCount();	long		
GetWireframe(BSTR filename);	IQaWireframe*		
GetWireframeByPos(long pos);	IQaWireframe*		
GetWireframeCount();	long		
HideDocument();	long		
IsDocManaged();	boolean	Get Managed Document setting.	
IsDocPathUNC(BSTR path_);	boolean		This method determines whether the passed path is a UNC Path. If an empty path is passed the path of the current opened document is used if any.
LoadManagedDocumentByFileName(BSTR filename_);	IQaManagedDocument*	Load Managed Documents for the given filename.	Event Choices, Report Choices, and Managed Routines are loaded for the selected document.
LoadManagedDocumentByID(BSTR id_);	IQaManagedDocument*	Load Managed Document by unique identifier.	Event Choices, Report Choices, and Managed Routines are loaded for the selected document.
LoadManagedDocuments(BSTR siteCode_, boolean loadSubordinates_);	LONG		Loading Managed Documents obtains a representation of the requested managed documents into the internal CM4D API memory list. This list will not allow any duplicates to be loaded and any attempt to do so will cause the older copy to be removed from the list and

			<p>the new copy to be added. Keep this in mind for QaManagedDocument objects that were obtained prior to a call to this method (or other variations of this method) as they may no longer be valid. This method clears the CM4D API memory list and loads Managed Documents for the given site code. A passed Site Code value of “*” will be taken to mean all sites. An empty Site Code value “” will be taken to mean the authenticated user’s default site. Event Choices, Report Choices, and Managed Routines can be loaded by passing “True” for the loadSubordinates_ parameter. Loading a managed document does not open the represented CM4D Document nor does it affect any CM4D document that is open. A loaded Managed Document is available on the internal list for subsequent GetManagedDocument... calls.</p>
MakeSnapShots(short res_);	long		
ManageCurrentDocument(BSTR name_, BSTR filename_, BSTR siteCode_, eManagedAsType type_);	LONG	Manage the current document.	This method will manage the current unmanaged document using the parameters passed and save the document using the provided filename. The Site Database is updated to reflect the change. A Universal Naming Convention (UNC) filename path maybe required by the system configuration.
ManageCurrentDocumentAs(BSTR name_, BSTR filename_, BSTR siteCode_, eManagedAsType type_);	LONG	Manage the current document as a copy of the current document.	This method will manage the current managed document using the parameters passed and save the document as a new document using the

		The Site Database is updated to reflect the change.	provided filename. The original managed document is unchanged and the current document becomes the newly saved document. The Site Database is updated to reflect the change. A UNC filename path maybe required by the system configuration.
NewDataSource();	IQaDbDataSource *		
NewDocument(BSTR filename);	long		
OpenDocument(BSTR documentName);	long		
OpenOldDocument(BSTR documentName);	long		
ProcessEvents();	long		
ReloadEligibleAnnots();	long		
SaveAsDocument(BSTR documentName);	long		
SaveDocument();	long		
ShowDocument();	long		
ShutDownCM4D();	void		
SiteDatabase();	BSTR		
UnloadManagedDocument(BSTR id_);	LONG	Unload Managed Document by unique identifier.	The identified Managed Document is removed from the CM4D API internal list.
UnLoadManagedDocuments(BSTR siteCode_);	LONG		This method unloads (removes from the internal CM4D API list) Managed Documents for the given site code. A passed Site Code value of “**” will be taken to mean all sites. An empty Site Code value “” will be taken to mean the authenticated user’s default site.

UnmanageCurrentDocument(void);	LONG	This method un-manages the current document.	The current document management settings are cleared and the document is saved as an unmanaged document. The Site Database is updated to reflect the change.
Update();	long		
UpdateDatabase(void);	LONG		This method updates changes to Site Configurations and Managed Documents to the Site Database. If a CM4D Document is open it is saved to update the Managed Document event choice, report choice, and managed routine information.

Doc Properties

Parameter	Type	Description	Remarks
AllowAnnotOffSheet;	boolean		
AllowAnnotSelectByTerminator;	boolean		
AnnotErrorHandling;	eAnnotErrorHandling		
AxisLabelX;	BSTR		
AxisLabelY;	BSTR		
AxisLabelZ;	BSTR		
ChrNorLabel;	BSTR		
ChrPosLabel;	BSTR		
ComparePrecision;	long		
DecimalPlaces;	long		
DrawBlackAndWhite;	boolean		
OpenWritable;	boolean		
ScriptAnnot;	IQaAnnot*		
ScriptSheet;	IQaSheet*		
ShowAnnotGhostBorder;	boolean		
SuspendQueryRefresh;	boolean		
SuspendResolve;	boolean		
Units;	eUnits		
UseViewSnapshots;	boolean		
ViewRotationAngle;	double		

Doc Enumerators

Units - eUnits

Parameters	Help String	Description	Remarks
eUnitsInches	Inches		
eUnitsMillimeters = 1,	Millimeters		

Error Handling - eAnnotErrorHandling

Parameters	Help String	Description	Remarks
eAnnotErrorHandlingAppendCode,	Append Code		
eAnnotErrorHandlingAppendE,	Append 'E'		
eAnnotErrorHandlingAppendMessage,	Append Message		
eAnnotErrorHandlingLeaveEmpty	Leave Empty		
eAnnotErrorHandlingNone = 0,	None		

API - Annot

Annot Methods

Parameter	Type	Description	Remarks
Delete();	long	Removes the annotation.	
GetBottom();	double		
GetDataSource();	IQaDataSource*		
GetLeader();	IQaLeader*		
GetLeft();	double		
GetRight();	double		
GetStyle();	IQaStyle*		
GetTop();	double		
Refresh();	void		
Reload();	long		
SetBottom(double value);	void		
SetBox(double left, double bottom, double right, double top);	long		
SetBoxRelative(double left, double bottom, double right, double top);	long		
SetLeft(double value);	void		
SetRight(double value);	void		
SetTop(double value);	void		

Annot Properties

Parameter	Type	Description	Remarks
AnnotSheet;	IQaSheet*		
AnnotType;	eAnnotType		
AutoReloadEligible;	boolean		
BuddyDataSourceType;	eAnnotBuddyDataSourceType		
BuddyHorizontalSpace;	double		
BuddyHorizontalType;	eAnnotBuddyHorizontalType		
BuddyLabel;	BSTR		
BuddyMatchHeight;	boolean		
BuddyMatchWidth;	boolean		
BuddyVerticalSpace;	double		
BuddyVerticalType;	eAnnotBuddyVertType		
EventAction;	eAnnotEventAction		
EventStyleLabel;	BSTR		
ExecuteAction;	eAnnotExecuteAction		
Label;	BSTR		
LoadFilename;	BSTR		

Locked;	boolean		
NoDraw;	boolean		

Annot Enumerators

Event Action - eAnnotEventAction

Parameters	Help String	Description	Remarks
eEventActionDrawIfTriggered	Draw Only If Triggered		
eEventActionNone = 0,	None		
eEventActionUseStyle,	Use Style		

Execute Action - eAnnotExecuteAction

Parameters	Help String	Description	Remarks
eExecuteActionActivate	Activate Link Sheet		
eExecuteActionNone = 0,	None		

Buddy Vertical Type - eAnnotBuddyVertType

Parameters	Help String	Description	Remarks
eBuddyVertTypeBottomBottom,	Align My Bottom with My Buddy's Bottom		
eBuddyVertTypeBottomCenter,	Align My Bottom with My Buddy's Center		
eBuddyVertTypeBottomInner,	Align My Bottom with My Buddy's Inner		
eBuddyVertTypeBottomOuter,	Align My Bottom with My Buddy's Outer		
eBuddyVertTypeBottomTop,	Align My Bottom with My Buddy's Top		
eBuddyVertTypeCenterBottom,	Align My Center with My Buddy's Bottom		
eBuddyVertTypeCenterCenter,	Align My Center with My Buddy's Center		
eBuddyVertTypeCenterInner,	Align My Center with My Buddy's Inner		
eBuddyVertTypeCenterOuter,	Align My Center with My Buddy's Outer		
eBuddyVertTypeCenterTop,	Align My Center with My Buddy's Top		
eBuddyVertTypeInnerBottom,	Align My Inner with My Buddy's Bottom		
eBuddyVertTypeInnerCenter,	Align My Inner with My Buddy's Center		
eBuddyVertTypeInnerInner	Align My Inner with My Buddy's Inner		
eBuddyVertTypeInnerOuter,	Align My Inner with My Buddy's Outer		
eBuddyVertTypeInnerTop,	Align My Inner with My Buddy's Top		
eBuddyVertTypeNone = 0,	None		
eBuddyVertTypeOuterBottom,	Align My Outer with My Buddy's Bottom		
eBuddyVertTypeOuterCenter,	Align My Outer with My Buddy's Center		
eBuddyVertTypeOuterInner,	Align My Outer with My Buddy's Inner		
eBuddyVertTypeOuterOuter,	Align My Outer with My Buddy's Outer		
eBuddyVertTypeOuterTop,	Align My Outer with My Buddy's Top		
eBuddyVertTypeTopBottom,	Align My Top with My Buddy's Bottom		

eBuddyVertTypeTopCenter,	Align My Top with My Buddy's Center		
eBuddyVertTypeTopInner,	Align My Top with My Buddy's Inner		
eBuddyVertTypeTopOuter,	Align My Top with My Buddy's Outer		
eBuddyVertTypeTopTop,	Align My Top with My Buddy's Top		

Buddy Horizontal Type - eAnnotBuddyHorizontalType

Parameters	Help String	Description	Remarks
eBuddyHorizontalTypeCenterCenter,	Align My Center with My Buddy's Center		
eBuddyHorizontalTypeCenterInner,	Align My Center with My Buddy's Inner		
eBuddyHorizontalTypeCenterLeft,	Align My Center with My Buddy's Left		
eBuddyHorizontalTypeCenterOuter,	Align My Center with My Buddy's Outer		
eBuddyHorizontalTypeCenterRight,	Align My Center with My Buddy's Right		
eBuddyHorizontalTypeInnerCenter,	Align My Inner with My Buddy's Center		
eBuddyHorizontalTypeInnerInner,	Align My Inner with My Buddy's Inner		
eBuddyHorizontalTypeInnerLeft,	Align My Inner with My Buddy's Left		
eBuddyHorizontalTypeInnerOuter,	Align My Inner with My Buddy's Outer		
eBuddyHorizontalTypeInnerRight,	Align My Inner with My Buddy's Right		
eBuddyHorizontalTypeLeftCenter,	Align My Left with My Buddy's Center		
eBuddyHorizontalTypeLeftInner,	Align My Left with My Buddy's Inner		
eBuddyHorizontalTypeLeftLeft,	Align My Left with My Buddy's Left		
eBuddyHorizontalTypeLeftOuter,	Align My Left with My Buddy's Outer		
eBuddyHorizontalTypeLeftRight,	Align My Left with My Buddy's Right		
eBuddyHorizontalTypeNone = 0,	None		
eBuddyHorizontalTypeOuterCenter,	Align My Outer with My Buddy's Center		
eBuddyHorizontalTypeOuterInner,	Align My Outer with My Buddy's Inner		
eBuddyHorizontalTypeOuterLeft,	Align My Outer with My Buddy's Left		
eBuddyHorizontalTypeOuterOuter	Align My Outer with My Buddy's Outer		
eBuddyHorizontalTypeOuterRight,	Align My Outer with My Buddy's Right		

eBuddyHorizontalTypeRightCenter,	Align My Right with My Buddy's Center		
eBuddyHorizontalTypeRightInner,	Align My Right with My Buddy's Inner		
eBuddyHorizontalTypeRightLeft,	Align My Right with My Buddy's Left		
eBuddyHorizontalTypeRightOuter,	Align My Right with My Buddy's Outer		
eBuddyHorizontalTypeRightRight,	Align My Right with My Buddy's Right		

Buddy DataSource Type - eAnnotBuddyDataSourceType

Parameters	Help String	Description	Remarks
eBuddyDataSourceDataSet	Align by DataSet		
eBuddyDataSourceFeature,	Align by Feature		
eBuddyDataSourceNone = 0,	No DataSource Alignment		

Type - eAnnotType

Parameters	Help String	Description	Remarks
e_annotChart,	Chart		
e_annotContainer,	Container		
e_annotGraph,	Graph		
e_annotGroup,	Group		
e_annotLine,	Line		
e_annotPicture	Picture		
e_annotPlotSpace,	Plotspace		
e_annotShape,	Shape		
e_annotTable,	Table		
e_annotView,	View		
e_annotView2,	View2		
e_annotViewAxes,	ViewAxes		
eAnnotText = 0,	Text		
eAnnotUnknown = -1,	Unknown annotation type		

API - Chart

API - Chart Area

Chart Area Methods

Parameter	Type	Description	Remarks
CreateAxis(eChartAxisPosition axis);	IQaChartAxis*		
CreateLine(eChartAreaLine lineType, BSTR label);	IQaChartLine*		
DeleteAxis(eChartAxisPosition axis);	long		
DeleteLine(eChartAreaLine line);	long		
GetAxis(eChartAxisPosition axis);	IQaChartAxis*		
GetLineStyle(eChartAreaLine line);	IQaStyle*		
GetMarkerStyle();	IQaStyle*		
GetSeriesStyle();	IQaStyle*		
GetStyle();	IQaStyle*		
GetUserDefinedLine(BSTR label);	IQaChartLine*		
GetUserDefinedLineByPos(long linePos);	IQaChartLine*		
HasLine(eChartAreaLine line);	boolean		

Chart Area Properties

Parameter	Type	Description	Remarks
PlotScaleAutoHorz;	boolean		
PlotScaleAutoVert;	boolean		
MarkerSize;	double		
PlotScaleMaxHorz;	double		
PlotScaleMaxVert;	double		
PlotScaleMinHorz;	double		
PlotScaleMinVert;	double		
MarkerShape;	eChartAreaMarkerShape		

Chart Area Enumerators

Line Type - eChartAreaLine

Parameters	Help String	Description	Remarks
eLineCenter,	Center Line		
eLineEllipse,	Ellipse		
eLineLowerControl,	Lower Control Limit		
eLineLowerSpec = 0,	Lower Spec Limit		
eLineLRL,	Lower Reasonable Limit		
eLineLSL2,	Lower Spec Limit 2		
eLineNominalZero,	Nominal/Zero		
eLineSemiMean,	Mean		
eLineUpperControl,	Upper Control Limit		
eLineUpperSpec,	Upper Spec Limit		

eLineURL,	Upper Reasonable Limit		
eLineUserDefined,	User Defined Line		
eLineUSL2,	Upper Spec Limit 2		
eTargetLimitEllipse2,	Target Limit Ellipse 2		
eTargetLimitEllipse3	Target Limit Ellipse 3		

Marker Shape - eChartAreaMarkerShape

Parameters	Help String	Description	Remarks
eMarkerShapeAsterisk,	Asterisk		
eMarkerShapeBar	Bar		
eMarkerShapeCheck,	Check Mark		
eMarkerShapeCircle,	Circle		
eMarkerShapeDiamond,	Diamond		
eMarkerShapeEastTriangle,	East Triangle		
eMarkerShapeHollowPlus,	Hollow Plus		
eMarkerShapeHollowX,	Hollow X		
eMarkerShapeNone = 0,	No Marker		
eMarkerShapeNorthTriangle,	North Triangle		
eMarkerShapePlus,	Plus		
eMarkerShapeSouthTriangle,	South Triangle		
eMarkerShapeSquare,	Square		
eMarkerShapeStar,	Four Corner Star		
eMarkerShapeWestTriangle,	West Triangle		
eMarkerShapeX,	X		

API - Chart Axis

Chart Axis Methods

Parameter	Type	Description	Remarks
GetStyle();	IQaStyle*		

Chart Axis Properties

Parameter	Type	Description	Remarks
LabelType;	eChartAxisLabelType		
PlotScaleInc;	double		
Position;	eChartAxisPosition		

Chart Axis Enumerators

Position - eChartAxisPosition

Parameters	Help String	Description	Remarks
ePositionBottom	Bottom		
ePositionLeft = 1,	Left		
ePositionRight,	Right		
ePositionTop,	Top		

Label Type - eChartAxisLabelType

Parameters	Help String	Description	Remarks
eLabelTextAlphaSequence	Alpha Sequence		
eLabelTextDecimal,	Decimal		
eLabelTextNone = 0,	None		
eLabelTextNumberSequence,	Number Sequence		
eLabelTextText,	Text		

API - Chart Line

Chart Line Methods

Parameter	Type	Description	Remarks
Delete();	long		
GetStyle();	IQaStyle*		

Chart Line Properties

Parameter	Type	Description	Remarks
Axis;	eChartLineAxis		
BeginX;	double		
BeginY;	double		
EllipseHorzLower;	BSTR		
EllipseHorzUpper;	BSTR		
EllipseVertLower;	BSTR		
EllipseVertUpper;	BSTR		
EndX;	double		
EndY;	double		
LineType;	eChartAreaLine		
UserLineLabel;	BSTR		
ValueText;	BSTR		

Chart Line Enumerators

Axis - eChartLineAxis

Parameters	Help String	Description	Remarks
eLineEllipses = 0,	Ellipse		
eLineHorizontal,	Horizontal		
eLineVertical,	Vertical		

API - Container

Container Methods

Parameter	Type	Description	Remarks
Delete();	long		
Duplicate(IQaContainer* container);	long		
GetBottom();	double		
GetDataSource();	IQaDataSource*		
GetLeader();	IQaLeader*		
GetLeft();	double		
GetRight();	double		
GetStyle();	IQaStyle*

DataSet Enumerators

Characteristic Type - eDataSetCharacteristicType

Parameters	Help String	Description	Remarks
eDataSetCharacteristicTypeActual = 1,	Actual		
eDataSetCharacteristicTypeDataSetCar	Car		
eDataSetCharacteristicTypeDeviation,	Deviation		

Usage Type - eDataSetUsageType

Parameters	Help String	Description	Remarks
eUsageIndXMR,	Individual & Moving Range (X-MR)		
eUsageTypeAverageRange,	Moving Average & Moving Range (MA-MR)		
eUsageTypeIndValue = 1,	Individual Value a.k.a. Trend, a.k.a. Run		
eUsageTypeMeanRange,	Subgroup Mean & Range (Xbar-R)		
eUsageTypeMeanSigma	Subgroup Mean & Sigma (Xbar-S)		

Sort Direction - eDataSetSortDirection

Parameters	Help String	Description	Remarks
eSortDirectionAscending = 1,	Ascending		
eSortDirectionDescending	Descending		

Event Type - eDataSetEventType

Parameters	Help String	Description	Remarks
eEventTypeAlways,	Always		
eEventTypeBetween,	Value Between		
eEventTypeBetweenOrEqualTo,	Value Between or Equal To		
eEventTypeCollectingData,	Collecting Data		
eEventTypeEqualTo,	Value Equal To		
eEventTypeGreater Than,	Value Greater Than		
eEventTypeGreater ThanOrEqualTo,	Value Greater Than or Equal To		
eEventTypeKeepMergedEvent	Keep Event from Merged DataSets		
eEventTypeLessThan,	Value Less Than		
eEventTypeLessThanOrEqualTo,	Value Less Than or Equal To		
eEventTypeNever = 0,	Never		
eEventTypeNoSampleData,	No Sample Data		

eEventTypeNoSpecLimits,	No Spec Limits		
eEventTypeNotBetween,	Value Not Between		
eEventTypeNotBetweenOrEqualTo,	Value Not Between or Equal To		
eEventTypeNotEqualTo,	Value Not Equal To		
eEventTypeOutOfControl,	Out Of Control		
eEventTypeOutOfControlUnassigned,	Out Of Control Unassigned		
eEventTypeOutOfReasonableTol,	Out Of Reasonable Tol		
eEventTypeOutOfTolerance,	Out Of Tolerance		
eEventTypeOutOfTolerance2,	Out Of Tolerance 2		

External Event Type - eDataSetExternalEventType

Parameters	Help String	Description	Remarks
eNeverTrigger = 0,	Never		
eOnlyTrigger1,	Trigger 1		
eOnlyTrigger2,	Trigger 2		
eTriggerBoth,	Trigger Both		
eTriggerEither	Trigger Either		

External Event Scope - eDataSetExternalEventScope

Parameters	Help String	Description	Remarks
eEventPerCell = 0,	Trigger Per Cell		
eEventPerRow,	Trigger Per Row		
eEventPerSet	Trigger Per DataSet		

External Event Attachment Type - eDataSetExternalEventAttachmentType

Parameters	Help String	Description	Remarks
eEventAttachmentBitmap	Attachment Bitmap		
eEventAttachmentJPG,	Attachment JPG		
eEventAttachmentMeta,	Attachment Metafile		
eEventAttachmentNone = 0,	Attachment None		
eEventAttachmentPDF,	Attachment PDF

eSQLServer,	SQL Server		

API - EventChoice

The **QaEventChoice** object represents an Event Choice entry in the CM4D Site Database. Each Event Choice is associated to one Managed Document and can be loaded when a Managed Document is loaded. Event Choices are created from DataSet entries in a CM4D Document and get updated when a CM4D Document is saved. CM4D Documents can be created, opened, managed, unmanaged, and saved via the QaDoc API object.

Event Choice Properties

Parameter	Type	Description	Remarks
EventLabel;	BSTR	Event Choice Event Label (get only)	
ID;	BSTR	Event Choice ID (get only)	
ManagedDocumentID;	BSTR	Event Choice Managed Document ID (get only)

eGraphTypeXMR,	X-MR		

API - Image

Qalmage is an object that represents a single document or routine 3D view image. All properties can be retrieved and set except for the **Label** property.

Image Methods

Parameter	Type	Description	Remarks
DeleteImage(void)	boolean	Deletes the image represented by the Qalmage object.	Document images are removed from the document. Routine images are removed from the database. Image files are not deleted by this method since they may be used by multiple documents or routines. Management of image files is done using the Windows file system.
LoadImage(void)	boolean	Loads the image into a CM4D document so it can appear in a CM4D 3D View.	

Image Properties

Parameters	Type	Description	Remarks
Layer	short	Image Layer	
Child	BSTR	Image Child	
Descr	BSTR	Image Description	
Label	BSTR	Image Label (get only)	
OffsetX	double	Image Offset X	
OffsetY	double	Image Offset Y	
OffsetZ	double	Image Offset Z	
Path	BSTR	Image Filename Path	
Scale	double	Image Scale	

API - Images

Qalmages is a list object that provides access to a Document or Routine image list. It is obtainable from a QaDoc, QaRoutine, or QaDbDataSource object via the new method “`IQaImages* GetImages (void)`” which returns an object representing the Qalmages list. Any methods that return an image object may return no object if no object is available for the request.

Images Methods

Parameter	Type	Description	Remarks
<code>GetCount(void);</code>	LONG	Returns the number of images in the list.	
<code>GetFirstImage(void);</code>	<code>IQalImage*</code>	Returns an image object that represents the first image in the list.	
<code>GetImage(BSTR label_);</code>	<code>IQalImage*</code>	Returns an image with the provided label.	The label of the image is always the filename title without the filename extension.
<code>GetImageByPosition(LONG position_);</code>	<code>IQalImage*</code>	Returns an image object that represents the image in the list at the position requested.	The number One (1) represents the first image.
<code>GetNextImage(void);</code>	<code>IQalImage*</code>	Returns an image object that represents the next image in the list that follows the previous image obtained by any of the other “GetImage...” methods.	
<code>NewImageForDocument(BSTR imagePath_);</code>	<code>IQalImage*</code>	Creates a new document image for “imagePath_” and returns an image object that represents it.	This method can be used with any Qalmages list.
<code>NewImageForRoutine(BSTR routineKeyLabel_, BSTR imagePath_);</code>	<code>IQalImage*</code>	Creates a new routine image for “routineKeyLabel_” and “imagePath_” and returns an image object that represents it.	The “routineKeyLabel_” is a label that uniquely identifies a routine and includes the handedness and routine key filters. It will have the form: RoutineA ^ LH ^ keyA ^ keyB. This method can only be used with a Qalmages list obtained from a QaRoutine or QaDbDataSource object. If the Qalmages list was obtained from a QaRoutine object the

			“routineKeyLabel_” can be an empty string and the new image will be associated to the respective routine object.

Line Enumerators

Terminator Type - eLineTerminatorType

Parameters	Help String	Description	Remarks
eLineTerminatorTypeArrow,	Arrow		
eLineTerminatorTypeDot	Dot		
eLineTerminatorTypeNone = 0,	None		

API - Managed Document

The **QaManagedDocument** object represents a Managed Document entry in the CM4D Site database. A Managed Document represents a CM4D Document that exists somewhere in the network file system. Managed Documents are created by managing a new or existing CM4D Document via methods in the QaDoc API object or via the CM4D application interface.

The CM4D API will maintain a list of Managed Documents as loaded by various `QaDoc.LoadManagedDocument...` methods. Managed Documents can be loaded with or without their associated subordinate objects (Event Choices, Report Choices, and Managed Routines). If loaded, this object has methods, as listed below, to obtain their representative objects. Document Manager Privilege is required to modify Managed Documents.

Managed Document Methods

Parameter	Type	Description	Remarks
<code>GetEventChoiceByPos(LONG position_);</code>	<code>IQaEventChoice*</code>	Get report Choice by list position	
<code>GetManagedRoutineByPos(LONG position_);</code>	<code>IQaManagedRoutine*</code>	Get Managed Routine by list position	
<code>GetReportChoiceByPos(LONG position_);</code>	<code>IQaReportChoice*</code>	Get Event Choice by list position	
<code>GetEventChoiceCount(void);</code>	<code>LONG</code>	Count of subordinate Event Choices	
<code>GetManagedRoutineCount(void);</code>	<code>LONG</code>	Count of subordinate Managed Routines	
<code>GetReportChoiceCount(void);</code>	<code>LONG</code>	Count of subordinate Report Choices	

Managed Document Properties

Parameter	Type	Description	Remarks
<code>CreateTime;</code>	<code>DATE</code>	Managed Document Create Date/Time	Get-only
<code>Filename;</code>	<code>BSTR</code>	Document Path and Filename	Get-only; fully qualified path
<code>ID;</code>	<code>BSTR</code>	Managed Document Unique Identifier	Get-only
<code>Name;</code>	<code>BSTR</code>	Managed Document Name	
<code>SiteID;</code>	<code>BSTR</code>	Site Unique Identifier	Get-only
<code>Status;</code>	<code>eManagedStatus</code>	Document Status	
<code>Type;</code>	<code>eManagedAsType</code>	Document Type	

Managed Document Enumerators

Managed Document Status - `eManagedStatus`

Parameters	Help String	Description	Remarks
<code>eManagedDisabled = 0,</code>	Managed Document Disabled		
<code>eManagedEnabled = 1</code>	Managed Document Enabled		

Managed Document Type - eManagedAsType

Parameters	Help String	Description	Remarks
eManagedAsCM4Di = 3,	CM4Di		
eManagedAsDynamicCM4D = 4,	Dynamic CM4D		
eManagedAsStaticCM4D = 1,	Static CM4D		
eManagedAsWorkcellCM4D = 5	Workcell CM4D		

API - Managed Routine

The **QaManagedRoutine** object represents a Managed Routine entry in the CM4D Site Database. Each Managed Routine is associated to one Managed Document and can be loaded when a Managed Document is loaded. Managed Routines are created from Query entries in a CM4D Document and get updated when a CM4D Document is saved. CM4D Documents can be created, opened, managed, unmanaged, and saved via the QaDoc API object.

Managed Routine Properties

Parameter	Type	Description	Remarks
AccessControlCode;	BSTR	Managed Routine Access Control Code	Get-only
DataSourceID;	BSTR	Managed Routine DataSource ID	Get-only
ManagedDocumentID;	BSTR	Managed Routine Managed Document ID	Get-only
RoutineDescription;	BSTR	Managed Routine Description	Get-only
RoutineID;	BSTR	Managed Routine ID	Get-only
RoutineLabel;	BSTR	Managed Routine Routine Label	Get-only

API - Picture

Picture Methods

Parameter	Type	Description	Remarks
Delete();	long		
Duplicate(IQaTable* table);	long

Query Enumerators

Types - eQueryType

Parameters	Help String	Description	Remarks
eQueryAccess,	MS Access		
eQueryAccessODBC,	Access/ODBC (obsolete)		
eQueryApi	API		
eQueryODBC,	ODBC (obsolete)		
eQueryOracle,	Oracle		
eQueryPersOracle,	Personal Oracle (obsolete)		
eQueryQuantum,	Quantum (obsolete)		
eQuerySQLServer,	SQL Server		
eQueryUndefined = 0,	Undefined		

Sample Types - eSampleType

Parameters	Help String	Description	Remarks
eSampleAll,	All Sample		
eSampleDuring,	During Timeframe		
eSampleLast,	Last 'n' Sample		
eSampleList,	Only Selected Samples		
eSampleNone = 0,	No Sample		
eSamplePrevious,	Previous Timeframe		
eSampleQuery	Query Samples		
eSampleSince,	Since Date/Time		

Sample Order Types - eSampleOrder

Parameters	Help String	Description	Remarks
eSampleOrderDate = 1,	Date		
eSampleOrderDesc,	Description		
eSampleOrderFilter	Filter		
eSampleOrderLabel,	Label		
eSampleOrderSeq,	Sequence		
eSampleOrderSer,	Serial		

Feature Filter Selection Types - eFeatureFilterSelectionType

Parameters	Help String	Description	Remarks
eAllFeaturesAsFiltered,	Only Features that match at least 1 specifier		
eListOfFeatures,	Only Features that match all specifiers		
eNoFeatures = -1,	No filtering (All Features)		
eQueryFeatures	Only Features from active subroutine		
eSubroutineFeatures,	Only Features selected from list		

Feature Filter Types - eFeatureFilterType

Parameters	Help String	Description	Remarks
eFeatureFilterAll	Only Features that match all specifiers		
eFeatureFilterNone = 0,	No filtering (All Features)		
eFeatureFilterOne,	Only Features that match at least 1 specifier		

Sample Filter Types - eSampleFilterType

Parameters	Help String	Description	Remarks
eSampleFilterNone = 0,	No filtering (All Samples)		
eSampleFilterOne,	Only Samples that match at least 1 specifier		
eSampleFilterAll	Only Samples that match all specifiers		

Routine Filter Types - eRoutineFilterType

Parameters	Help String	Description	Remarks
eRoutineFilterAll	Only Routines that match all specifiers		
eRoutineFilterNone = 0,	No filtering (All Routines)		
eRoutineFilterOne,	Only Routines that match at least 1 specifier		

Sample During Types - eSampleDuringType

Parameters	Help String	Description	Remarks
eSampleDuringDay = 1,	Day		
eSampleDuringMonth,	Month		
eSampleDuringWeek,	Week		
eSampleDuringYear	Year		

Sample Cutoff Date Type - eSampleCutoffDateType

Parameters	Help String	Description	Remarks
eAbsolute,	Absolute		
eNoCutoff,	No Cutoff		
eRelative	Relative		

Deviation Characteristic Type - eDeviationCharacteristicType

Parameters	Help String	Description	Remarks
e_chrAngle,	Angle		
e_chrAzi,	Azimuth		
e_chrDia,	Diameter		
e_chrDist,	Distance		
e_chrFlush,	Flush		
e_chrGap,	Gap		
e_chrHor,	Horizon		
e_chrLen,	Length		
e_chrNor = 66,	Normal		

e_chrP,	Primary		
e_chrPol,	Polar		
e_chrPos = 0,	Position		
e_chrRadius,	Radius		
e_chrS,	Secondary		
e_chrSig = 36,	Significant		
e_chrT,	Tertiary		
e_chrTol	Toleranced		
e_chrWid,	Width		
e_chrX,	X		
e_chrY,	Y		
e_chrZ,	Z		

Deviation SMI Type - eDeviationSmiType

Parameters	Help String	Description	Remarks
e_smiDist,	Distance		
e_smiFlush,	Flush		
e_smiGap	Gap		
e_smiHole,	Hole		
e_smiMid,	Midpoint		
e_smiNon = 0,	Non		
e_smiRef,	Reference		
e_smiSlot,	Slot		
e_smiSurf,	Surface		
e_smiVar,	Variance		

Deviation Type - eDeviationType

Parameters	Help String	Description	Remarks
e_DevCar,	Car		
e_DevOffset	Offset		
e_DevVector = 1,	Vector		

API - Query Filter

Query Filter Properties

Parameter	Type	Description	Remarks
Exclude;	boolean		
Label;	BSTR		
Value;	BSTR		

API - Report Choice

The **QaReportChoice** object represents a Report Choice entry in the CM4D Site Database. Each Report Choice is associated to one Managed Document and can be loaded when a Managed Document is loaded. Report Choices are created from Sheet entries in a CM4D Document and get updated when a CM4D Document is saved. CM4D Documents can be created, opened, managed, unmanaged, and saved via the [QaDoc](#) API object.

Report Choice Properties

Parameter	Type	Description	Remarks
ID;	BSTR	Report Choice Unique Identifier	Get-only
ManagedDocumentID;	BSTR	Report Choice Managed Document Unique Identifier	Get-only
ReportLabel;	BSTR	Report Choice Report Label	Get-only
ReportSequence;	LONG	Report Choice Report Sequence	Get-only
SheetLabel;	BSTR	Report Choice Sheet Label	Get-only
SheetSetLabel;	BSTR	Report Choice Sheet Set Label	Get-only

API - Routine

Routine Methods

Parameter	Type	Description	Remarks
Delete();	long		
Filter(BSTR Filter_);	BSTR		
Filter(BSTR Filter_, BSTR IpszNewValue);	void		
GetCode();	BSTR		
GetFeatureByPos(short pos_);	IQaFeature*		
GetFeatureCount();	long		
GetFeaturesAvailable();	long		
GetFilterByID(short id_);	IQaFilter*		
GetFilters();	IQaFilters*		
GetHand();	BSTR		
GetImages(void);	IQaImages*	Returns an object representing the QaImages list.	
GetSamplesAvailable();	long		
KeyLabel();	BSTR		
NewFeature(BSTR label_);	IQaFeature*		
SetHand(eRoutHandedness hand_);	long		

Routine Properties

Parameter	Type	Description	Remarks
AccessCode;	BSTR		
Label;	BSTR		
MonitorDataProcessed;	boolean		
MonitorEndOfSubgroup;	boolean		
MonitorOutOfSpec;	boolean		
Units;	eUnits		

Routine Enumerators

Handedness - eRoutHandedness

Parameters	Help String	Description	Remarks
eBothHanded = 4	Both		
eLeftHanded = 2,	LH		
eNotHanded = 0,	Not Handed		
eRightHanded = 1,	RH		

Monitor Flag - eRoutMonitor

Parameters	Help String	Description	Remarks
eDataProcessed = 1,	Data Processed		
eEndOfSubgroup = 4	End of Subgroup		
eNotMonitored = 0,	Not Monitored		
eOutOfSpec = 2,	Out of Spec		

API - Sample

Sample Methods

Parameter	Type	Description	Remarks
GetFilter(BSTR filter_);	BSTR		
GetFilterByID(short id_);	IQaFilter*		
GetKeyLabel();	BSTR		
GetLabel();	BSTR		
GetRoutine();	IDispatch*		

Sample Properties

Parameter	Type	Description	Remarks
DateTime;	DATE		
Description;	BSTR		
Sequence;	long		
Status;	short		

API - Scheduler DataSource

Scheduler DataSource Methods

Parameter	Type	Description	Remarks
GetDataSource();	IQaDataSource*		

Scheduler DataSource Properties

Parameter	Type	Description	Remarks
IsActive;	boolean		
ReportNameDefault;	BSTR		

API - Score

Score Methods

Parameter	Type	Description	Remarks
CreateBin(BSTR label);	IQaScoreBin*		
GetBin(BSTR label);	IQaScoreBin*		
GetBinByPos(long pos);	IQaScoreBin*		
GetBinCount();	long		
GetLabel();	BSTR		
GetStartBin();	IQaScoreBin*		

Score Properties

Parameter	Type	Description	Remarks
StartBinType;	short		

API - Score Bin

Score Bin Properties

Parameter	Type	Description	Remarks
BoundaryText;	BSTR		
Label;	BSTR		
ScoreText;	BSTR		
ScoreValue;	double		
StyleLabel;	BSTR		

API - Shape

Shape Methods

Parameter	Type	Description	Remarks
Delete();	long		
Duplicate(IQaShape* shape);	long		
GetBottom();	double		
GetDataSource();	IQaDataSource*		
GetLeader();	IQaLeader*		
GetLeft();	double		
GetRight();	double		
GetStyle();	IQaStyle*		
GetTop();	double		
Refresh();	void		
Reload();	long		
SetBottom(double value);	void		
SetBox(double left, double bottom, double right, double top);	long		
SetBoxRelative(double left, double bottom, double right, double top);	long		
SetLeft(double value);	void		
SetRight(double value);	void		
SetTop(double value);	void		

Shape Properties

Parameter	Type	Description	Remarks
BuddyDataSourceType;	eAnnotBuddyDataSourceType		
BuddyHorizontalSpace;	double		
BuddyHorizontalType;	eAnnotBuddyHorizontalType		
BuddyLabel;	BSTR		
BuddyMatchHeight;	boolean		
BuddyMatchWidth;	boolean		
BuddyVerticalSpace;	double		
BuddyVerticalType;	eAnnotBuddyVertType		
EventAction;	eAnnotEventAction		
EventStyleLabel;	BSTR		
ExecuteAction;	eAnnotExecuteAction		
Label;	BSTR		
LoadFilename;	BSTR		
Locked;	boolean		
NoDraw;	boolean		
ShapeType;	eShapeType		

Shape Enumerators

Shape Type - eShapeType

Parameters	Help String	Description	Remarks
eShapeTypeAsterisk = 1,	Asterisk		
eShapeTypeCheck,	Check Mark		
eShapeTypeDiamond,	Diamond		
eShapeTypeEastTriangle,	East Triangle		
eShapeTypeEllipse,	Ellipse		
eShapeTypeHollowPlus,	Hollow Plus		
eShapeTypeHollowX,	Hollow X		
eShapeTypeNorthTriangle,	North Triangle		
eShapeTypePlus,	Plus		
eShapeTypeRectangle,	Rectangle		
eShapeTypeSouthTriangle,	South Triangle		
eShapeTypeStar	Four Corner Star		
eShapeTypeWestTriangle,	West Triangle		
eShapeTypeX,	X		

API - Sheet

Sheet Methods

Parameter	Type	Description	Remarks
Activate();	void		
CreateChart(BSTR label);	IQaChart*		
CreateContainer(BSTR label, BSTR filename);	IQaContainer*		
CreateGraph(BSTR label);	IQaGraph*		
CreateLine(BSTR label);	IQaLine*		
CreatePicture(BSTR label);	IQaPicture*

GetTextCount();	long		
GetView(BSTR label);	IQaView*		

GetViewByPos(long pos);	IQaView*		
GetViewCount();	long		
Print();	long		
PrintBitmap(BSTR filename, long width, long height);	long		
PrintClipboard();	long		
PrintJPEG(BSTR filename, long width, long height);	long		
PrintMetafile(BSTR filename);	long		
PrintPDF(BSTR filename);	long		

Sheet Properties

Parameter	Type	Description	Remarks
Color;	eColor		
Label;	BSTR		

API - SheetSet

SheetSet Methods

Parameter	Type	Description	Remarks
CreateSheet(BSTR label);	IQaSheet*		
Delete();	long		
GetSchedulerDataSource();	IQaSchedulerDataSource*		
GetSheet(BSTR sheetLabel)	IQaSheet*		
GetSheetByPos(long pos);	IQaSheet*		
GetSheetCount();	long		
HasAutoReport();	boolean		
Print();	long		
PrintPDF(BSTR filename);	long		
UndefineAutoReport();	long		

SheetSet Properties

Parameter	Type	Description	Remarks
AllowPrintScheduler;	boolean		
AllowPrintWTC;	boolean		
Label;	BSTR		
Length;	double		
Orientation;	eSheetSetOrientation		
SchedulerRefreshAutoReport;	boolean		
Size;	eSheetsetSize		
Width;	double		

SheetSet Enumerators

Size - eSheetsetSize

Parameters	Help String	Description	Remarks
eSizeA,	A		
eSizeA0	A0		
eSizeA1,	A1		
eSizeA2,	A2		
eSizeA3,	A3		
eSizeA4,	A4		
eSizeB,	B		
eSizeC,	C		
eSizeCustom = 0,	Custom		
eSizeD,	D		
eSizeE,	E		

Orientation - eSheetSetOrientation

Parameters	Help String	Description	Remarks
eOrientationLandscape = 1,	Landscape		
eOrientationPortrait	Portrait		

API - Site Configuration

The **QaSiteConfiguration** object represents a Site Configuration entry in the CM4D Site Database. When CM4D is started all Site Configurations are loaded from the Site Database and become available to the API. The **QaDoc** API object has methods to get Site Configurations. Changes to Site Configurations must be committed via the **QaDoc.UpdateDatabase** method. A CM4D document does not need to be opened (via **QaDoc.OpenDocument**) to obtain or update Site Configurations. New Site Configurations must be added via the **SiteManager** application. Site Manager Privilege is required to modify Site Configurations.

Site Configuration Properties

Parameter	Type	Description	Remarks
ChangeLogging;	eChangeLogging	Site Change Logging Status	
Code;	BSTR	Site Code	Get-only
Description;	BSTR	Site Description	
ID;	BSTR	Site Unique Identifier	Get-only
ImagePath;	BSTR	Site Image Path	
Label;	BSTR	Site Label	
UncPath;	BSTR	Site UNC Path	

Site Configuration Enumerators

Change Logging - eChangeLogging

Parameters	Help String	Description	Remarks
eChangeLoggingOff = 0,	Change Logging Off		
eChangeLoggingOn = 1	Change Logging On		

API - Style

Style Properties

Parameter	Type	Description	Remarks
BaseStyleLabel;	BSTR		
BorderMarginBottom;	double

Style Enumerators

Pen Style - eStylePenStyle

Parameters	Help String	Description	Remarks
ePenStyleDash,	Dash		
ePenStyleDashDot,	Dash Dot		
ePenStyleDashDotDot	Dash Dot Dot		
ePenStyleDot,	Dot		
ePenStyleSolid = 1,	Solid		

Brush Hatch - eStyleBrushHatch

Parameters	Help String	Description	Remarks
eBrushHatchCross,	Cross		
eBrushHatchDiagonal,	Diagonal		
eBrushHatchDownDiagonal,	Down Diagonal		
eBrushHatchHorizontal,	Horizontal		
eBrushHatchNone = 0,	None		
eBrushHatchUpDiagonal,	Up Diagonal		
eBrushHatchVertical	Vertical		

Border Type - eStyleBorderType

Parameters	Help String	Description	Remarks
eBorderTypeBox,	Box		
eBorderTypeButton	Button		
eBorderTypeCircumEllipse,	Circumscribed Ellipse		
eBorderTypeInscribedEllipse,	Inscribed Ellipse		
eBorderTypeInvisible,	Invisible		
eBorderTypeNone = 0,	None		
eBorderTypeRoundedBox,	Rounded Box		
eBorderTypeShadow,	Shadow		

Font Weight - eStyleFontWeight

Parameters	Help String	Description	Remarks
eFontWeightBold,	Bold		
eFontWeightExtraBold,	Extra Bold		
eFontWeightExtraThin,	Extra Thin		
eFontWeightHeavy	Heavy		
eFontWeightLight,	Light		
eFontWeightMedium,	Medium		
eFontWeightNormal,	Normal		
eFontWeightSemiBold,	Semi Bold		
eFontWeightThin = 1,	Thin		

Alignment - eAlignment

Parameters	Help String	Description	Remarks
eAlignmentCenter,	Center		
eAlignmentLeft = 1,	Left		
eAlignmentRight	Right		

Font Orientation - eStyleFontOrientation

Parameters	Help String	Description	Remarks
eFontOrientationHorizontal = 1,	Horizontal		
eFontOrientationVerticalLeft,	Vertical Left		
eFontOrientationVerticalRight	Vertical Right		

Format Lead Character - eStyleFormatLeadChar

Parameters	Help String	Description	Remarks
eFormatLeadCharNone = 0,	None		
eFormatLeadCharSpaces,	Spaces		
eFormatLeadCharZero	Zero		

API - Subroutine

Subroutine Methods

Parameter	Type	Description	Remarks
Filter(BSTR Filter_);	BSTR		
Filter(BSTR Filter_, BSTR IpszNewValue);	void		
GetFilters();	IQaFilters*		
GetHand();	BSTR		
KeyLabel();	BSTR		
SetHand(eRoutHandedness hand_);	long		

Subroutine Properties

Parameter	Type	Description	Remarks
AccessCode;	BSTR		
Label;	BSTR		
MonitorDataProcessed;	boolean		
MonitorEndOfSubgroup;	boolean		
MonitorOutOfSpec;	boolean		

API - Table

Table Methods

Parameter	Type	Description	Remarks
Delete();	long		
Duplicate(IQaTable* table);	long

View Enumerators

Rotate Iso X - eViewRotateIsoX

Parameters	Help String	Description	Remarks
eRotateIsoFront = 1	Front		
eRotateIsoRear	Rear		
eRotateIsoXCenter	Center		

Rotate Iso Z - eViewRotateIsoZ

Parameters	Help String	Description	Remarks
eRotateIsoBottom	Bottom		
eRotateIsoTop = 1	Top		
eRotateIsoZCenter	Center		

Feature Marker Type - eFeatureMarkerType

Parameter	Help String	Description	Remarks
eFeatureMarkerTypeArrow	Arrow		
eFeatureMarkerTypeCone	Cone		
eFeatureMarkerTypeCube	Cube		
eFeatureMarkerTypeNone = 0	No Marker		
eFeatureMarkerTypeRoundedCross	Rounded Cross		
eFeatureMarkerTypeSphere	Sphere		
eFeatureMarkerTypeSquaredCross	Squared Cross		
eFeatureMarkerTypeTube	Tube		

Marker Type - eMarkerType

Parameters	Help String	Description	Remarks
eMarkerTypeAsterisk	Asterisk		
eMarkerTypeCheck	Check Mark		
eMarkerTypeCircle	Circle		
eMarkerTypeDiamond	Diamond		
eMarkerTypeEastTriangle	East Triangle		
eMarkerTypeHollowPlus	Hollow Plus		
eMarkerTypeHollowX	Hollow X		
eMarkerTypeNone = 0	No Marker		
eMarkerTypeNorthTriangle	North Triangle		
eMarkerTypePlus	Plus		
eMarkerTypeSouthTriangle	South Triangle		
eMarkerTypeSquare	Square		
eMarkerTypeStar	Four Corner Star		
eMarkerTypeWestTriangle	West Triangle		
eMarkerTypeX	X		

Feature Marker Feature Type - eFeatureMarkerFeatureType

Parameters	Help String	Description	Remarks
e_featureMarkerDist	Distance		
e_featureMarkerFlush	Flush		
e_featureMarkerGap	Gap		
e_featureMarkerHole	Hole		
e_featureMarkerMid	Midpoint		
e_featureMarkerNon	Non		
e_featureMarkerPlane	Plane		
e_featureMarkerPolar	Polar		
e_featureMarkerRange	Range		
e_featureMarkerRef	Reference		
e_featureMarkerSlot	Slot		

e_featureMarkerSurf=0	Surface		
e_featureMarkerXyz	XYZ		

Feature Mode - eFeatureMode

Parameters	Help String	Description	Remarks
eFeatureModeActual	Actual		
eFeatureModeAnimateAlignment	AnimateAlignment		
eFeatureModeStandard = 0	Standard		

Feature Marker Material - eFeatureMarkerMaterial

Parameters	Help String	Description	Remarks

API - Wireframe

Wireframe Methods

Parameter	Type	Description	Remarks
Delete();	long		
Refresh();	long		

Wireframe Properties

Parameter	Type	Description	Remarks
ColorOverride;	eColor		
Filename;	BSTR		
HandOverride;	eHandedness		
LayerOverride;	long		
StyleOverride;	eWireframeStyle		
ThickOverride;	double		
UseColorOverride;	boolean		
UseHandOverride;	boolean		
UseLayerOverride;	boolean		
UseStyleOverride;	boolean		
UseThickOverride;	boolean		

Wireframe Enumerators

Style - eWireframeStyle

Parameters	Help String	Description	Remarks
eStyleCenterline	Centerline		
eStyleDashed,	Dashed		
eStylePhantom,	Phantom		
eStyleSolid = 1,	Solid		

Enumerators

Characteristic - eCharacteristic

Parameters	Help String	Description	Remarks
eCharacteristicAngle	Angle		
eCharacteristicDiameter,	Diameter		
eCharacteristicDistance,	Distance		
eCharacteristicLength,	Length		
eCharacteristicPosition = 1,	Position		
eCharacteristicPrimary,	Primary Coordinate		
eCharacteristicSecondary,	Secondary Coordinate		
eCharacteristicTertiary,	Tertiary Coordinate		
eCharacteristicWidth,	Width		
eCharacteristicXCoordinate,	X Coordinate		
eCharacteristicYCoordinate,	Y Coordinate		
eCharacteristicZCoordinate,	Z Coordinate		

Color - eColor

Parameters	Help String	Description	Remarks
eColorAqua	Aqua		
eColorBlack = 1	Black		
eColorBlue	Blue		
eColorFushcia	Fushcia		
eColorGray	Gray		
eColorGreen	Green		
eColorLightAqua	LightAqua		
eColorLightBlue	LightBlue		
eColorLightFuchsia	LightFuchsia		
eColorLightGray	LightGray		
eColorLightGreen	LightGreen		
eColorLightLime	LightLime		
eColorLightMaroon	LightMaroon		
eColorLightNavy	LightNavy		
eColorLightOlive	LightOlive		
eColorLightOrange	LightOrange		
eColorLightPurple	LightPurple		
eColorLightRed	LightRed		
eColorLightSilver	LightSilver		
eColorLightTeal	LightTeal		
eColorLightYellow	LightYellow		
eColorLime	Lime		
eColorMaroon	Maroon		

eColorNavy	Navy		
eColorOlive	Olive		
eColorOrange	Orange		
eColorPurple	Purple		
eColorRed	Red		
eColorSilver	Silver		
eColorTeal	Teal		
eColorWhite	White		
eColorYellow	Yellow		

Handedness - eHandedness

Parameters	Help String	Description	Remarks
eHandednessNone = 0	None		
eHandednessRight	Right		
eHandednessLeft	Left		
eHandednessOther	Other		
eHandednessBoth	Both		

Example API Scripts

No Events (External Event)

VB Code Snippet (in "Immediate" format) to set up for external no Events (Never Trigger):

```
set doc = CreateObject( "QaDoc" )

io = doc.OpenDocument( "C:\Testing\~tEvents\Event API Test.4dc" )

set ds = doc.GetDataSet( "My DataSet" )

ds.ExternalEventType( eNeverTrigger )

doc.SaveDocument()

doc.CloseDocument()
```

CM4D Settings Before Example Script	CM4D Settings After Example Script
<p>Event Properties</p> <p>Trigger on 1 only</p> <p>Sheet Image:</p> <p>Sheet Name: ~doc,title~ - ~sheet,setLabel~ - ~sheet,label~ - ~date~</p> <p>Event Coverage</p> <p><input type="radio"/> Per Cell <input type="radio"/> Per Row <input checked="" type="radio"/> Entire DataSet</p> <p>Priority: 0</p> <p>Event Notes:</p>	<p>Event Properties</p> <p>Never Trigger</p> <p>Sheet Image:</p> <p>Sheet Name: ~doc,title~ - ~sheet,setLabel~ - ~sheet,label~ - ~date~</p> <p>Event Coverage</p> <p><input type="radio"/> Per Cell <input type="radio"/> Per Row <input checked="" type="radio"/> Entire DataSet</p> <p>Priority: 0</p> <p>Event Notes:</p>

Event Trigger 2 (External Event)

VB Code Snippet (in "Immediate" format) to set up for the external Event Trigger 2 (Trigger on 2 only):

```
set doc = CreateObject("QaDoc")
io = doc.OpenDocument("C:\Testing\~tEvents\Event API Test.4dc")
set ds = doc.GetDataSet("My DataSet")

ds.ExternalEventType(eOnlyTrigger2)
ds.ExternalEventScope(eEventPerSet)
ds.ExternalEventAttachmentType(eEventAttachmentPDF)
ds.ExternalEventNote("My event note for testing")
doc.SaveDocument()
doc.CloseDocument()
```

CM4D Settings Before Example Script	CM4D Settings After Example Script
